CHANGE REQUEST

Addition of Survey Control Point, PH-2

Applicable Reference:

Surface Sediment FSP, SOP for Horizontal and Vertical Control (Appendix B-1)

Description of Change:

Addition of PH-2 as a survey control point to SOP for Horizontal and Vertical Control. PH-2 is an over water pier piling at the research vessel moorage location.

Reason for Change:

The PH-1 location was intended for a trailered boat. Our boats are not trailered on a daily basis. PH1 is over 300 feet and uphill from the dock, making it impossible to use as a daily check-in for the boats. PH-2 is located where the boats are docked daily. PH2 coordinates were captured in DEA Bathymetric Survey which is sub-decimeter accuracy.

Impact on Present and Completed Work:

None.
